

WDDF - 06

1. Mail Merge: Create many documents at once.
2. <section>: Group of content.
- <article>: Independent content.
- <div>: Generic container.
3. Raster: Made of pixels. They lose quality when resized and zoomed (JPEG, PNG).
- Vector: Made of mathematical paths and remain sharp at any size (SVG, AI).
4. Absolute units: (px, cm) are fixed.
- Relative units: (% , em, rem) change based on screen.
5. Array: An array is a list of items [1,2].
- forEach(): is a loop through each item.
6. onclick: handles one event.
- addEventListener(): adds multiple events.
7. forEach(): loop / no return
- map(): returns a new array.
8. z-index: stack order of elements.
9. == checks for value only (loose equality)
- === checks for both value and data type (strict equality).
10. CSS framework: pre-written code for speed.
- Custom CSS: self-written for unique design.
11. Absolute: parent based.
- Relative: offset, own position.
- Fixed: screen based.
12. bind() method: create a new function.
13. Media queries: apply CSS based on screen size.
14. try...catch: handle errors.
15. Synchronous: one-by-one
- Asynchronous: parallel.
16. DOM (Document Object Model): A programming interface for HTML and XML documents.
17. for...of loop: Loop through values.
- Example:
for (let x of [1,2]) { console.log(x); }
18. Purpose of ICT code in workplace: Ensures safe, ethical and responsible use of ICT in workplace.
19. Basic folder structure for web design project: create folders like assets, css, js, images, index.html.
20. Flexbox: aligns and distributes items for responsive layout.
21. CSS framework advantage: fast. Disadvantage: less control/customization.
22. VPNs enhance websites by securing data and protecting user privacy.
23. Static: fixed content.
- Dynamic: changes with server.
- Interactive: responds to user actions in real time.
24. I prefer Visual Studio Code because it is fast, free and has useful extensions.

25. FTP software is used to upload and manage website files on a server.
26. Login page:
HTML
<form>
<input type="text"> for username
<input type="password"> for password
<button type="submit">Submit</button>
</form>
27. Use SVG for logos, icons and scalable graphics without losing quality.
28. ID selector in CSS is used to style a specific HTML element using (#idname).
29. Multiple CSS classes: use space-separated class names in class attributes.
30. Function:
function greet(name){ return "Hello!" + name; }
console.log(greet("Ratul"));
31. Declarations are hoisted. Expressions are not hoisted.
32. Array: list of items.
33. for: runs for a specific count.
- while: checks condition first.
- do-while: runs at least once then checks condition.
34. Conditional statements in JS: if, else if, else, switch.
35. Open Google Drive → New → Google Sheets.
36. phpMyAdmin: web tool used to manage MySQL databases.
37. Loop: used to repeat a block of code multiple times.
38. DOM: programming interface for HTML document.
39. Strict mode: safer JS mode using "use strict".
40. Bubbling: event goes child → parent.
- Capturing: event goes parent → child.
41. Search engines index web pages and show relevant results.
42. Popular frameworks: React, Angular, Vue (frontend), Node.js, Django, Laravel (backend).
43. Interactive website features respond to user actions and show dynamic content.
44. Responsive design ensures compatibility across devices.
45. Code editor features: syntax highlighting, auto-complete, error checking, extensions, live preview.
46. RESTful APIs use HTTP methods to access and manage data between client and server.
47. AJAX lets web pages update data without reloading.
48. BOM (Browser Object Model): lets JavaScript interact with browsers.
49. Manipulate in JavaScript means changing data or DOM elements.
50. A condition checks true or false to control code flow.
51. JSON is a data format for exchanging data.
